HOW TO TEST MODERN WORKPLACES IN THE AGE OF THE EVERGREEN PARADIGM

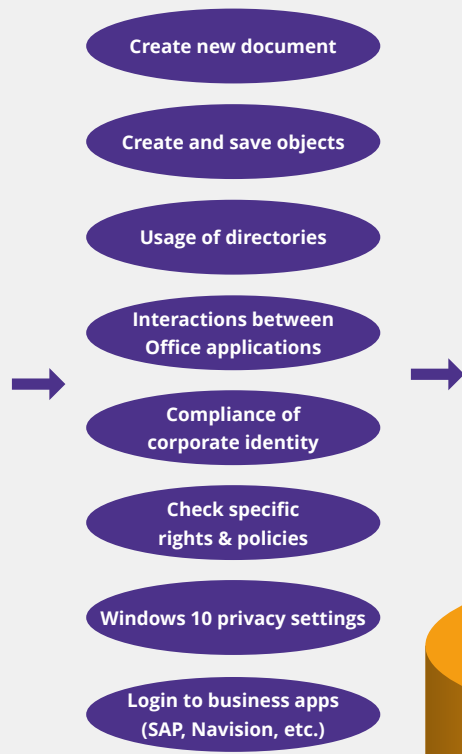

Use automated test sets for Windows 10 and mobile devices

Today's employee workstation and mobile devices run Office, as well as collaboration and business applications within a complex infrastructure. Here, the heterogeneous types of workplaces (e.g. fat clients, VDI, App-V, XenDesktop, mobile devices) are the challenge in an era of evergreen-based update cycles.

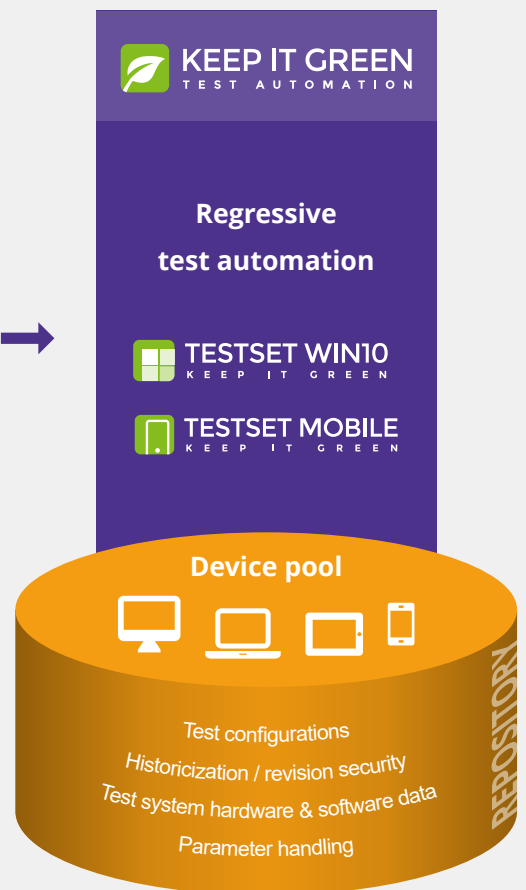

Office & collaboration applications plus system settings

Use cases / test cases

Our solution for the workplace manager

Out-of-the-box solutions check system settings (Win10 end devices) and central core functions of Office & collaboration applications in a fully automated manner.

How do we perform these new QA tasks in the context of permanent or short-term requirement cycles (agile, DevOps, evergreen IT)?

By using our TA solution Keep IT Green, an eggplant-based portfolio of methods and products, to optimize customer-specific TA tasks.
